About This Software

View profiles of a wide range of animals from Africa, Asia, Australasia, Europe, North America, Arctic and South America.

Create your own calendars, greeting cards, party kits, stationery, t-shirts and more!

Play or create your own jigsaws, sodoku, sliding puzzle and memory match games.

Use all your own photos and imagery or use the large library of images already supplied.

Create your own wallpapers and screensavers or use the ones supplied to customise your desktop.

Use the editing tools to trace around areas of your photos to cut out people, pets, or anything else to use in your scenes.

Add effects using the effect tools.

Key Features

Print Studio

- Calendars
- Posters
- Greeting Cards

-
- Party Kits. Address labels, invitations and place settings
 - Stationery. Letterheads, notepaper
 - Bookmarks
 - Door Hangers

Quiz

Test your knowledge of animals of the region.

Games and Puzzles

- Memory Match
- Sliding Puzzle
- Jigsaw Puzzle
- Sudoku

Desktop Themes

- Wallpapers. Use the pre-supplied ones or create your own
- Screensavers. Use the pre-supplied ones or create your own

Poor controls.. Great

Now I can make soundtrack for my simple games very easy and fast.. Ported directly from phone to PC with some oversights for PC.

Lock on to enemies which can harm you more than help you, when doing the tutorial it told me to swipe to punch? Swipe what exactly? Had to mash my keyboard to find out the correct button to use. Can't use the mouse scroll wheel to navigate menus, but you can click and drag.

Yeah, no.. Honestly the best game I have ever game. can't play/ loads the splash screens but them noting but an empty black screen. tried all of the compatibility options and just can not get it to play on windows 10.. By far the best hidden object game I've ever played. It was like playing a movie. The story was really well developed, unlike most other games like this, which don't really focus too hard on giving a really good story most of the time. The ending was well done too- it tied everything together, and wasn't insanely abrupt like others that I have seen. Yeah lol I don't know- I obviously really enjoyed it, so I would fully recommend. the plot of this game is so ridiculous that you have to play it just for that

Not close to workable, the physics necessary to enjoy this aren't there.. game often lags hard with the graphs it crashies sometimes better of buying a bus simulator game from OMSI's system yes price is high but at least the game is better.. This satisfied me for some reason. Take my money.. Production values are not high, all mechanics feel flawed and underdeveloped, boss battles are broken, but this game gets♥♥♥♥♥♥DONE.

The main problem of pre COD MW shooters is dreadful pacing and level design, but in this game they are surprisingly good, even better than in many modern shooters. All it achieved without cutscenes or filler mechanics, which makes it more impressive. No enemy highlighting, no stormtrooper shooting, fail to slam slo mo button or find cover in less than 1 second - you dead. Every next room feels suspicious, every ambush is exciting, every medkit is welcomed, it's like you're actually playing a videogame and not sucking a♥♥♥♥♥♥of some bay area designer and not being able to even experience failstate because QA were a bunch of babies.. Great game. Combination of poker and fantasy. It is not for every taste but great for spending few hours.. Truly an amazing game with a very real feel of sandbox play. Despite what faction you choose to start out with, maintaining or changing your affiliations via reputation or otherwise is all in how you decide to play a role. I'm not a huge fan of the ship design limitations, especially that adding a small room to the inside of your ship creates a HUGE set of obnoxious and (frankly) off-scale exterior blocks that can seriously ruin your ideal image/design of your creation.

The universe is simply huge and I'd gather it's every bit as big as Elite Dangerous', No Man's Sky's, or Star Citizen's universe. When the ship tells you that it will take 3000+ days to get to a location without accelerating, it means it and it's very obvious from the first time you set to leave a planet's nearby exo-sphere at anything less than Warp 3. I love this game, it's got all the right elements there for PvP and PvE and the amount of grind is also, notably, balanced as well. Combat could use some more polishing, joystick HOTAS integration is still needed, and the ship editor needs some tweaking, but overall the game is pretty awesome and if the playerbase would simply give it a chance, I think we really see a hard hitting competitor in the mix here.

9/10 Recoms
